Code samples

Ruby

```
class Invoice
  # Sums the lines, in cents.
  def total(lines)
    lines.sum { |l| l.quantity * l.unit_cents }
  end
end
puts "Total: #{Invoice.new.total([])}"
```

Rust

```
/// Renders a document to PDF bytes.
pub fn render(html: &str) -> Result<Vec<u8>, Error> {
    let doc = Document::parse(html)?;
    Ok(doc.print())
}
```

JavaScript

```
const rows = [1, 2, 3].map((n) => ({ id: n, label: `row ${n}` }));
export default async function load(url) {
  return rows.filter((r) => r.id !== 2);
}
```

SQL, HTML and an unnamed block

```
SELECT customer, SUM(amount) AS total FROM invoices
WHERE issued_on >= '2026-01-01' GROUP BY customer;
```

```
<figure class="island"><img src="chart.png" alt="Chart"></figure>
```

plain text stays plain: 1 + 1 = 2
